acm

## Grid

You are on an nxm grid where each square on the grid has a digit on it. From a given square that has digit $\boldsymbol{k}$ on it, a Move consists of jumping exactly $\boldsymbol{k}$ squares in one of the four cardinal directions. A move cannot go beyond the edges of the grid; it does not wrap. What is the minimum number of moves required to get from the top-left corner to the bottom-right corner?

## Input

Each input will consist of a single test case. Note that your program may be run multiple times on different inputs. The first line of input contains two space-separated integers $\boldsymbol{n}$ and $\boldsymbol{m}(1 \leq \boldsymbol{n}, \boldsymbol{m} \leq 500)$, indicating the size of the grid. It is guaranteed that at least one of $\boldsymbol{n}$ and $\boldsymbol{m}$ is greater than 1 .

The next $\boldsymbol{n}$ lines will each consist of $\boldsymbol{m}$ digits, with no spaces, indicating the $\boldsymbol{n x m}$ grid. Each digit is between 0 and 9 , inclusive.

The top-left corner of the grid will be the square corresponding to the first character in the first line of the test case. The bottom-right corner of the grid will be the square corresponding to the last character in the last line of the test case.

## Output

Output a single integer on a line by itself representing the minimum number of moves required to get from the top-left corner of the grid to the bottom-right. If it isn't possible, output -1.

Sample Input

## Sample Output

| 22 | 2 |
| :--- | :--- |
| 11 |  |
| 11 | -1 |
| 22 |  |
| 22 | 6 |
| 22 | 4 |
| 2120 |  |
| 1203 |  |
| 3113 |  |
| 1120 |  |
| 1110 |  |
